

Cancer Risk Assessment and Screening

This benefit gives the **policyholder** access to a prevention-led digital cancer risk and screening support service.

The service is provided by Perci Health, a Care Quality Commission registered virtual cancer clinic, backed by Macmillan Cancer Support.

The service includes integrated access to an AI-supported skin risk indication service via the SkinVision app.

What is this benefit?

Westfield Health's Cancer Risk Assessment and Screening benefit is designed to help **you** understand **your** personal cancer risk, take appropriate action and access specialist cancer nurse guidance where clinically appropriate.

It helps **you** to:

- Understand **your** personal cancer risk
- Take practical, evidence-based steps to reduce that risk
- Stay up to date with NHS screening
- Monitor **your** skin for early signs of change
- Message Cancer Nurse Specialists if **you** have questions or concerns
- Access private screening where clinically appropriate, on a self-pay basis

The service is delivered through a secure digital platform that **you** can access at any time. It brings together personalised risk insights, prevention guidance, screening support and secure nurse messaging in one place, so **you** know what to do next and where to turn for support.

What's covered...

1. Personalised Cancer Risk Assessment & Prevention Support

- A clinically validated online cancer risk assessment aligned to national screening guidance
- Review of lifestyle factors, family history, medical history and symptoms
- Clear information about NHS screening programmes relevant to **you**
- A personalised prevention pathway tailored to **your** age and risk profile
- Secure messaging with a Cancer Nurse Specialist for reassurance or guidance

The platform provides trusted information to help you understand symptoms, screening and when to seek further advice.

2. Screening Support

- NHS-first signposting in line with national screening eligibility criteria
- Clear guidance to help **you** understand appropriate screening options
- Prompts and reminders to support participation in NHS screening programmes
- Access to an AI-supported skin assessment tool via the SkinVision app; up to 10 checks per year
- Risk indication for moles or skin changes
- Access to private screening services for **you** on a self-pay basis, where clinically appropriate. The private screening accessed through this service is available where clinically appropriate and does not replace NHS screening where you are eligible.
- Secure upload of private screening results for nurse explanation and guidance
- Cancer Nurse Specialist follow-up for moderate or high-risk results

Screening tests identify possible risk or early signs of cancer. They do not confirm a diagnosis. If a result indicates increased risk or an abnormal finding, further clinical assessment and investigation are required.

3. Nurse-led cancer support

- Access to UK-based, Nursing and Midwifery Council registered Cancer Nurse Specialists
- Secure digital messaging with a nurse for cancer-related questions or concerns
- Guidance on symptoms, screening options and understanding results

- Where elevated risk, concerning symptoms or abnormal private screening results are identified, an appointment with a Cancer Nurse Specialist may be provided in line with clinically defined criteria.

Nurse support provides education and guidance and does not replace GP, hospital or specialist care.

How do I access the service?

If **you** are eligible, **you** access the service through the My Westfield.

1. Log into My Westfield and select Cancer Risk Assessment and Screening
2. Click the link and then complete a short registration to securely activate **your** access with Perci Health
3. Complete **your** personalised cancer risk assessment
4. Receive tailored prevention guidance, screening recommendations and access to Cancer Nurse Specialist messaging through the digital platform

Once registered, **you** can return to the platform at any time.

What's not covered...

- Diagnosis or treatment of cancer
- Emergency medical care
- Replacement for GP, hospital or specialist services
- Guaranteed access to screening without clinical review
- Payment for private screening
- Face-to-face consultations
- Exclusions (see section 6, General Terms and Conditions)

If **you** have urgent symptoms or concerns about **your** health, contact **your GP** or NHS 111.
